**Subject:****Recommendation for Ushbah Kaleem for Commonwealth Master's Scholarship 2025****Dear Admissions Committee,**

I am delighted to write this letter to recommend Ms. Ushbah Kaleem for the Commonwealth Master's Scholarship. As both her Project Management Officer (PMO) and mentor, I have worked, observed, and supervised her closely, and in doing so, I have witnessed her professional growth, outstanding capabilities, and unwavering commitment to her work as an AI engineer for more than a year.

Ushbah joined as a trainee AI engineer coming from a stereotypical engineering background. However, she surprised everyone with her outstanding learning capabilities and dedication when she was among the top 7 students in the induction/training period. She cleared all the online courses and exams with flying colours. Her ability to rapidly adapt to new challenges didn't just impress me, but the team noticed her leads and the company's Chief Science Officer. Owing to that and her outstanding scores, she was placed in the best team of the company, the AIMed team, where the team is expected to work on novel ideas and utilize their research capabilities. Transitioning from Aerospace Engineering to Artificial Intelligence (AI) and Machine Learning (ML), she demonstrated an incredible capacity to grasp complex concepts effortlessly. Her proactive approach and analytical mindset enabled her to contribute significantly to our projects, requiring little to no support—showcasing her independence and intellectual strength.

Her Chronic Disease Prediction and Recommendation system is one of her most recent and notable achievements. She played a key role by implementing a fusion model of multiple prediction models using Bayesian Model Averaging. This dynamic tool enhanced the accuracy of the disease outcome predictions and proved flexible enough to extend to future projects, including Nexus, our flagship Prediction, Recommendation, and Treatment Application. Delivering this project well in time underlined her technical proficiency, versatility, and ability to leverage AI to create and make a real-world impact.

Through her work and extensive training in AI and ML, Ushbah has grown immensely, broadening her expertise and demonstrating her eagerness to tackle new challenges within the field. Her transition into AI has revealed her adaptability, and she is perfectly positioned to excel further in AI and Data Science. Regarding the Commonwealth Master's Scholarship, I firmly believe Ushbah embodies the values the program seeks to polish and enhance. The scholarship aims to support talented individuals who will contribute to sustainable development, and Ushbah is an ideal candidate. She has the potential to become a leader in AI, as I have seen myself with her juniors calling her for guidance. She is particularly popular among those seeking advice or guidance on making the transition from another background into AI easier. Health data science, which is critical for countries like Pakistan, is where she has the potential to make a big difference. Her keen analytical abilities, passion for Health AI/Data Science and commitment to continuous learning make her ideally suited to the program. Ushbah is an exceptional AI engineer and a driven individual with a vision to bring positive change. Her leadership skills and research-oriented mindset will undoubtedly make her a strong ambassador for Pakistan, contributing meaningfully to the Commonwealth program and her home country upon her return. I think of it as a perfect match from which both parties can benefit, and this program might well be the missing piece of the puzzle she is seeking to make a picture-perfect journey for her.

In conclusion, I am confident that Ushbah Kaleem will do amazingly well wherever she goes and significantly contribute to academia and society. I wholeheartedly recommend her for the Commonwealth Master's Scholarship. If you need any further information, feel free to contact me.

Sincerely,

**Abdullah Sohail**

AOA,

I've tailored the LOR a bit more towards the program requirements. Please check if it is okay.
